Metal building systems are used for commercial buildings, industrial, recreation, retail, shopping centers, picnic shelters, garages, canopies, parking, storage, mini storage, church buildings, gymnasiums, sheds, and more. These steel building kits can be erected quickly to allow the new business to start operating faster. The steel building uses I beam columns and rafters for main bents or main steel framing, usually the metal building main frames are 25 feet apart, and zee girts and purlins ( cee channels) for framing between the steel building kit rafters. The girts/purlins support the metal roof panels and metal wall panels. Walls can also be masonry or metal stud with brick or stucco finish. Many accessories can be used on the metal building such as overhangs or canopies with metal soffits, vents, floor systems, cranes and hoists, skylite panels for lighting, windows, wainscot, liner, doors, vents, curbs for air conditioning. Very economical compared to other types of construction, call today for a metal building quote. 615-822-4811
